Use Cases for CampusSphere

The various user classes identified the following use cases and primary actors for CampusSphere:

Primary Actor	Use Cases
Student	1. Complete Onboarding Survey 2. Receive Personalized Opportunity Recommendations 3. Apply for an Opportunity & Track Application Status 4. Bookmark Opportunity & Receive Deadline Reminders 5. Edit Skill Profile & Resume 6. Search and Filter Opportunities Manually 7. Withdraw a Submitted Application 8. Manage Notification Preferences
Faculty / Recruiter / Club Leadership (Organizer)	9. Post an Opportunity for Approval
Admin	10. Approve Opportunity Postings & Moderate Platform 11. Manage Categories and Tags

Last Updated By:	Rajwardhan Singh
Date Last Updated:	31/Aug/26

Use Case ID:	1
Use Case Name:	Complete Onboarding Survey
Created By:	Rajwardhan Singh
Date Created:	24/Aug/26
Actors:	Student
Description:	A newly registered Student completes a short skills/interests survey that seeds their profile and gives the Recommendation Engine an initial basis for generating opportunity recommendations before any application history exists.
Preconditions:	1. Student has registered and logged into CampusSphere. 2. Student has not yet completed the onboarding survey.
Postconditions:	1. Student's skill/interest profile is created and stored. 2. Recommendation Engine generates an initial set of recommended opportunities. 3. Student's onboarding status is marked complete.
Normal Flow:	**1.0 Complete Survey** 1. System prompts Student to complete the onboarding survey after first login. 2. System displays survey questions covering academic program, skills, interests, and career goals. 3. Student selects/enters responses for each survey question. 4. Student submits the completed survey. 5. System validates that all required questions are answered. 6. System stores the survey responses as the Student's initial skill/interest profile. 7. System invokes the Receive Personalized Recommendations use case to generate an initial set. 8. System displays a confirmation and redirects the Student to their personalized dashboard.
Alternative Flows:	**1.1 Skip survey for now (after step 2)** 1. Student selects “Skip for now.” 2. System stores a partial/empty profile and marks onboarding as incomplete. 3. System displays only popularity-based recommendations until the survey is completed. **1.2 Save and resume later (after step 3)** 1. Student selects “Save and continue later.” 2. System stores partial responses; Student is prompted again at next login.
Exceptions:	1.0.E.1 Required question left unanswered (at step 5) 1. System highlights the unanswered required question(s) and prevents submission. 1.0.E.2 Network/session interruption during submission (at step 4) 1. System retains the Student's in-progress responses and allows a retry.
Includes:	None
Priority:	High
Frequency of Use:	Once per Student (at onboarding); occasionally revisited to update profile.

Business Rules:	BR-1 (every Student must have a profile before receiving personalized recommendations), BR-2 (survey questions are configurable by Admin)
Special Requirements:	1. Survey should take no more than 5 minutes to complete on a mobile device. 2. Progress must be saved automatically every 30 seconds.
Assumptions:	1. Students are willing to spend a few minutes providing accurate skill/interest information. 2. The initial survey questions are broad enough to apply across all departments.
Notes and Issues:	1. Consider allowing Students to import skills from a LinkedIn profile in a future release. Open, unassigned.

Date Last Updated:	31/Aug/26

Use Case ID:	2
Use Case Name:	Receive Personalized Opportunity Recommendations
Created By:	Ramitha Ramesh
Date Created:	24/Aug/26
Actors:	Student
Description:	The system continuously generates and refines a ranked list of opportunity recommendations for each Student, combining their survey profile with ongoing behavior (applications, bookmarks, profile edits), so recommendations grow more relevant the longer the Student uses the platform.
Preconditions:	1. Student has completed at least a partial onboarding survey. 2. Student is logged into CampusSphere.
Postconditions:	1. A ranked list of recommended opportunities is displayed to the Student. 2. The recommendation model's weighting for the Student is updated based on new interactions.
Normal Flow:	**2.0 Generate Recommendations** 1. Student navigates to the “Recommended for You” section of the dashboard. 2. System retrieves the Student's current skill/interest profile. 3. System retrieves the Student's recent activity (applications, bookmarks, searches). 4. System scores all open opportunities against the Student's profile and activity signals. 5. System ranks and displays the top-scoring opportunities with a brief “why recommended” note. 6. Student may bookmark, apply to, or dismiss any recommended opportunity. 7. System records the Student's response as a new feedback signal. 8. System incorporates this feedback into the Student's profile weighting for future cycles.
Alternative Flows:	**2.1 Insufficient data for personalized recommendations (at step 4)** 1. System detects no survey/activity history and displays popularity-based recommendations instead. **2.2 Student dismisses a recommendation (after step 6)** 1. Student marks a recommendation as “Not relevant.” 2. System removes it and down-weights similar opportunities in future cycles.
Exceptions:	2.0.E.1 No open opportunities match the Student's profile (at step 5) 1. System displays a message indicating no close matches and suggests browsing manually.
Includes:	None
Priority:	Useful (differentiating, not launch-blocking — see Vision document Precedence and Priority)
Frequency of Use:	Every dashboard view; recommendation refresh runs at least once daily.
Business Rules:	BR-3 (only approved, open opportunities may be recommended), BR-4 (a Student's data is used only to personalize their own recommendations)
Special Requirements:	1. Recommendation list must load in under 2 seconds. 2. The system must explain, in one short phrase, why each opportunity was recommended.

Assumptions:	1. Students who interact more will receive progressively better recommendations than the cold-start experience. 2. A weighted-scoring model is sufficient for the pilot; a fuller ML model may follow later.
Notes and Issues:	1. Open issue: whether to show a numeric “match score” or keep it qualitative only — to be decided during UI design.

Use Case ID:	3
Use Case Name:	Apply for an Opportunity & Track Application Status
Created By:	Rayi Charan Harsha
Date Created:	24/Aug/26
Actors:	Student
Description:	A Student applies to an open opportunity using their existing profile and resume, and tracks the status of that application (Applied, Under Review, Shortlisted, Rejected, Selected) from a personal dashboard.
Preconditions:	1. Student is logged in. 2. Opportunity is open and accepting applications. 3. Student has an up-to-date resume/profile on file (or provides one during application).
Postconditions:	1. Application record is created and linked to the Student and the Opportunity. 2. Organizer is notified of the new application. 3. Application appears in the Student's “My Applications” dashboard with status “Applied.”
Normal Flow:	**3.0 Apply for an Opportunity** 1. Student views an opportunity's detail page. 2. Student selects “Apply.” 3. System displays the application form pre-filled with the Student's profile and resume. 4. Student reviews and edits the pre-filled information if needed. 5. Student confirms and submits the application. 6. System validates that all required fields are complete and the opportunity is still open. 7. System creates the application record with status “Applied.” 8. System sends a confirmation to the Student and an alert to the opportunity's Organizer. 9. System displays the new application in the Student's application-tracking dashboard.
Alternative Flows:	**3.1 Apply with a different resume (after step 3)** 1. Student uploads an alternate resume for this application only, without changing the default profile resume. **3.2 Check application status later (separate flow)** 1. Student navigates to “My Applications” and System displays all applications and their current status.
Exceptions:	3.0.E.1 Opportunity closes before submission (at step 6) 1. System informs the Student the deadline has passed and suggests similar open opportunities. 3.0.E.2 Required profile fields missing (at step 6) 1. System identifies missing fields (e.g., resume not uploaded) and prompts the Student to complete them.
Includes:	None
Priority:	Critical

Frequency of Use:	Several times per Student per semester, concentrated around recruitment/hackathon seasons.
Business Rules:	BR-5 (a Student may not apply twice to the same opportunity), BR-6 (applications cannot be submitted after the stated deadline)
Special Requirements:	1. Application submission must complete within 3 seconds under normal load. 2. Status changes must trigger a notification within 1 minute.
Assumptions:	1. Most Students will use their default profile/resume without modification for most applications.
Notes and Issues:	1. Consider adding a “withdraw application” action in a future release. Open, low priority.

Date Last Updated:	31/Aug/26

Use Case ID:	9
Use Case Name:	Post an Opportunity for Approval
Created By:	Rajwardhan Singh
Date Created:	24/Aug/26
Actors:	Faculty, Recruiter, Student Club Leadership (“Organizer”); Admin (approves)
Description:	An Organizer (Faculty member, Recruiter, or Club leader) creates a new opportunity posting (internship, research project, workshop, or club recruitment), which is routed to an Admin for approval before it becomes visible to Students.
Preconditions:	1. Organizer is logged in with an approved account. 2. Organizer's organization/department has been verified by an Admin.
Postconditions:	1. Opportunity is stored with status “Pending Approval.” 2. Admin is notified of the new posting awaiting review. 3. Once approved, the opportunity becomes visible/searchable and eligible for recommendation.
Normal Flow:	**4.0 Create and Submit Opportunity** 1. Organizer selects “Post New Opportunity.” 2. System displays the posting form (title, description, category, tags, eligibility, deadline). 3. Organizer completes the form and attaches any supporting documents. 4. Organizer submits the opportunity for approval. 5. System validates that all required fields are complete. 6. System stores the opportunity with status “Pending Approval.” 7. System notifies the assigned Admin that a new posting is awaiting review.
Alternative Flows:	**4.1 Save as draft (after step 3)** 1. Organizer selects “Save as Draft” instead of submitting; System stores it visibly only to the Organizer. **4.2 Edit a previously posted opportunity (separate flow)** 1. Organizer edits an existing opportunity; significant edits (deadline, eligibility) route back through Admin approval, minor edits apply immediately.
Exceptions:	4.0.E.1 Organization not yet verified (at step 1) 1. System informs the Organizer verification is required and offers a link to the verification request form.
Includes:	None
Priority:	Critical
Frequency of Use:	Several postings per week per active Organizer, peaking at the start of each semester.
Business Rules:	BR-7 (only verified organizations may post), BR-8 (all postings require Admin approval before becoming visible)
Special Requirements:	1. Admin must be notified of new submissions within 1 minute.

	2. Organizers must be able to see the approval status of their own postings at any time.
Assumptions:	1. Admin approval turnaround is typically under 24 hours during business days.
Notes and Issues:	1. Open issue: should minor edits to an already-approved posting require re-approval? Currently assumed no; to confirm with the Placement Cell.

Use Case ID:	4
Use Case Name:	Bookmark Opportunity & Receive Deadline Reminders
Created By:	Ramitha Ramesh
Date Created:	24/Aug/26
Actors:	Student
Description:	A Student bookmarks opportunities of interest and receives automated reminder notifications as each bookmarked (or applied-to) opportunity's deadline approaches, reducing the chance of missing it.
Preconditions:	1. Student is logged in. 2. At least one opportunity exists that the Student can bookmark.
Postconditions:	1. Opportunity is added to the Student's bookmark list. 2. Reminder notifications are scheduled for the opportunity's deadline.
Normal Flow:	**5.0 Bookmark and Get Reminded** 1. Student views an opportunity and selects “Bookmark.” 2. System adds the opportunity to the Student's bookmark list. 3. System schedules reminder notifications at configured intervals before the deadline (e.g., 7 days, 1 day, 3 hours). 4. As each interval is reached, System sends the Student an in-app (and, if enabled, email) notification. 5. Student may act on the reminder by opening the opportunity and applying, or dismiss it.
Alternative Flows:	**5.1 Remove a bookmark (separate flow)** 1. Student selects “Remove Bookmark”; System removes it and cancels pending reminders. **5.2 Reminders for applied opportunities (variant)** 1. System also schedules deadline-adjacent reminders for opportunities already applied to, without requiring a bookmark.
Exceptions:	5.0.E.1 Opportunity is closed or withdrawn before its deadline (at step 4) 1. System cancels further pending reminders and notifies the Student the opportunity is no longer available.
Includes:	None
Priority:	Important
Frequency of Use:	Continuous background process; an active Student bookmarks several opportunities per month.
Business Rules:	BR-9 (reminders are only sent for open opportunities), BR-10 (a Student may opt out of email reminders but not in-app notifications)
Special Requirements:	1. Reminder scheduling must account for time zone. 2. Notification delivery should have at least 99% reliability.
Assumptions:	1. Most Students prefer at least one reminder in the final 24 hours before a deadline.

Notes and Issues:	1. Open issue: should reminder intervals be configurable per Student? Currently fixed platform-wide; candidate for a future release.

Last Updated By:	Rayi Charan Harsha
Date Last Updated:	31/Aug/26

Use Case ID:	10
Use Case Name:	Approve Opportunity Postings & Moderate Platform
Created By:	Rayi Charan Harsha
Date Created:	24/Aug/26
Actors:	Admin
Description:	An Admin reviews opportunities submitted by Organizers, approves or rejects them (with feedback), and monitors platform-wide analytics and reported content to keep the platform trustworthy and useful.
Preconditions:	1. Admin is logged in with Admin-role permissions. 2. At least one opportunity is pending approval, or analytics data exists to review.
Postconditions:	1. Opportunity status is updated to Approved, Rejected, or Changes Requested. 2. Organizer is notified of the decision. 3. Approved opportunities become visible to Students; rejected ones do not.
Normal Flow:	**6.0 Review and Approve a Posting** 1. Admin opens the “Pending Approvals” queue. 2. System displays all opportunities awaiting review, with organizer and submission details. 3. Admin opens an opportunity to review its content against posting guidelines. 4. Admin approves the opportunity. 5. System updates the status to “Approved” and makes it visible/searchable to Students. 6. System notifies the Organizer that their posting was approved.
Alternative Flows:	**6.1 Reject a posting (after step 3)** 1. Admin selects “Reject” and enters a reason; System notifies the Organizer with the stated reason. **6.2 Request changes (after step 3)** 1. Admin selects “Request Changes”; System returns the opportunity as an editable draft with feedback attached. **6.3 View platform analytics (separate flow)** 1. Admin opens the Analytics Dashboard; System displays postings, applications, active users, and recommendation-engagement metrics. **6.4 Moderate reported content (separate flow)** 1. Admin opens the “Reported Content” queue and chooses to remove the item, warn the user, or dismiss the report.
Exceptions:	6.0.E.1 Opportunity contains content violating platform guidelines (at step 3) 1. Admin rejects the posting citing the specific guideline violated; System logs the violation against the Organizer's account.
Includes:	None
Priority:	Critical
Frequency of Use:	Daily during active recruitment periods; several approvals per day.

Business Rules:	BR-8 (all postings require Admin approval before becoming visible), BR-11 (rejected postings must include a reason visible to the Organizer)
Special Requirements:	1. The Pending Approvals queue must support filtering by organization type and submission date. 2. Analytics dashboard must be exportable (CSV).
Assumptions:	1. A single Admin (or small Admin team) can keep pace with the pilot's posting volume without becoming a bottleneck.
Notes and Issues:	1. Open issue: should approval authority be delegated to department-level Faculty Coordinators for their own department? Under discussion.
